

How To Spot Fake Virus Scam

Here are some of the possible screens you can run into while browsing the internet.

When you run into these or other screens that pop up saying you have a “Virus” while browsing online the first thing you should do is attempt to close the page. If this does not work you should attempt to shut down your system using the start menu *usually located in the lower left hand corner* and tell your system to Shut down. If that does not work then you have to do a “Hard Off” on the system by pressing and holding the power button till it turns off. If you let anyone on your system shut it down immediately and call us at 360-807-0266 or stop in Mon-Fri 8-5pm.
